☐ no restrictions

☐ vegetarian

☐ vegan

☐ celiac

☒ other

Responsive enabling: when "other" is selected, text box becomes active to fill in info

Pick for the week or get specific each day!

ALL WEEK

MON

TUES

WED

THURS

FRI

SAT

SUN

select all that apply

☐ breakfast

☐ lunch

☐ dinner

Card stack: User can select to have meals all week or specify which day they want which meals

Who's Ordering?

☐

☐ select preferred contact

Responsive disabling: when button is pressed, Full Name input will black out and only allow for email & phone input

Property Notes:

*

Dynamic hinting (shading) when cursor is located over radio buttons to disclose user's preferred contact method

Pliant response hinting: "cancel" & "submit" will act like a real button when clicked and held, but not released. This allows them to change their mind and click away if needed

Looks like you missed something! ***

* Input hinting in text fields throughout.

** This will help the user discover pliancy of radio buttons.

*** On-screen error message. Important to locate your error more quickly with less frustration. In this case, the user is missing the Email of the person ordering.

Clicking Submit will take you to the screen for billing and address information for the meal recipient.

It is integral to the design that the fonts & buttons be a little larger than usual, allowing for the likelihood that the person ordering is older and may have trouble reading a small screen with tiny buttons. I wanted to create something big and bright and friendly, that would make the process as simple as possible.
