

WeChef

WeChef is a sovereign web-based application designed to be used by restaurant professionals that are looking for ways to increase productivity, decrease stress levels and frustration with current solutions, and improve the overall experience of cooks. The design is clean and simple but professional. It includes daily culinary lessons and/or inspirational material to keep management engaged with their teams. It's an application for chefs, designed by chefs. It allows the focus to shift towards the food. In short, WeChef makes cooking fun again! It's also environmentally and fiscally conscious, allowing restaurants to go paper-free by removing mechanical machines from their establishments.

Homepage/Login/Sign up

- 1 Homepage has a daily quote or educational snippet w/photo front and center (This changes everyday and all restaurants can submit entries). This snippet is called the Daily Bite. A philosophy of WeChef is creating an environment of learning and growth that often goes overlooked in professional kitchens
- 2 User can cycle between today's date and a current time display. This takes up a small yet significant space in the footer and is not meant to be distracting, only functional.
- 3 Drop down menu allows the user to select their profile from the home screen
- 4 Dashboard icon is nestled in the header to the right of the screen. The user's eye travels here after reviewing the Daily Bite
- 5 Settings hamburger icon stays close to the Dashboard icon for quick access
- 6 Clicking on the dashboard icon will allow the user to login if they already have an account and have been previously logged out
- 7 If the user doesn't have an account and needs to sign up, there's a link below the sign in form

Dashboard/Go Live

- 1 Tool tips help user discover icon functions, in this case we discover the dashboard
- 2 Go Live button will take user to the main functionality of the application. All buttons on the Dashboard will make use of pliant response hinting, and user can click away if they have made a mistaken selection
- 3 Dashboard icon is greyed out when user is already there

Quick tip:
Click here to access your dashboard

Live Screen/ Service Functionality

- 1 Go Live is where the chef and/or manager accesses all tickets for the restaurant. Tickets will have drag and drop functionality across the screen to allow greater flexibility when using the system.
- 2 "Ticket Rail" at bottom scrolls left and right to allow user to find older tickets with ease
- 3 Tickets are color coded according to amount of time since they first came in. User can set the amount of time before tickets change color in settings according to their specific needs. Red means the ticket is over the allotted time, yellow is approaching the limit soon, green is a newer order making good time`
- 4 Click on the quick settings gear to expand "on the fly" settings
- 5 Expandable/collapsible quick settings, in order:
Voice Assistance- reads tickets aloud if the restaurant gets busy and the chef needs to step away to help
Profile- user can change current profile settings quickly if a different manager needs to step in and take over
Language- user can switch between three languages if necessary in the middle of service
- 6 "All Day" icon opens a nonmodal window that displays inventory of menu items in order of fewest to most available, according to numbers that management has put into the system
- 7 "All Day" window stays open on the side until you close it out. User can also adjust numbers of menu items this way to prevent having to leave the dashboard

Inventory Inputs

- 1 The Inventory screen allows user to input counts on items available in the restaurant. This helps notify management and server staff when Items are low so that orders don't get put in if the kitchen staff can't make them. Items are arranged by station that produces it default but can be filtered according to other categories e.g. beef, chicken, fish, vegetarian, pasta etc.

Ticket Rail Settings

- 1 The "Ticket Rail" is kitchen lingo for where all the tickets are kept to keep them organized during service. In the case of WeChef, we use the term because it closely resembles it visually, but also because the user can quickly and easily access tickets with a flick of the finger. This screen allows for finer adjustments of it's size, position, and functionality.
